Permanent Link to VectorNav Technologies introduces VN-360 GPS-Compass
2021/05/12

VectorNav Technologies has introduced the VN-360 GPS-Compass heading and position sensor. The VN-360 is an OEM GPS-Compass module that provides an accurate, True North heading solution for systems integrators seeking a reliable alternative to magnetic-based sensors. Many systems currently available on the market depend on digital magnetometers for providing heading measurements of a manned or unmanned platform. However, the majority of these platforms (such as multi-rotor UAVs, ground robots or satellite antennas) also include ferrous materials, motors, batteries or electrical components that drastically limit the ability of a magnetometer to provide an accurate or reliable heading solution. VectorNav's VN-360 provides a miniature, cost-effective GPS-based alternative that is unaffected by these magnetic disturbances and changes to the magnetic environment.

Incorporating two onboard GNSS receivers, the VN-360 calculates the relative position between its two GNSS antennas to derive a heading solution that is an order of magnitude more accurate than a magnetic compass. It supports a variety of GNSS antennas that can be mounted on the host platform with a separation distance anywhere from a few centimeters out to several meters. This distance can be configured to provide optimal start-up time, outputting an accurate heading solution typically under two minutes. "The VN-360 is like no other product on the market in that it provides a cost-effective solution for the difficult challenge of obtaining an accurate and reliable heading solution," said VectorNav President John Brashear. "VectorNav's GPS-Compass technology marks a turning point in the way we approach heading measurement and will improve the capabilities and performance of a variety of next-generation manned and unmanned systems." The VN-360 is ideal for applications such as antenna pointing, multi-rotor UAVs and aerostats, automated agriculture, heavy machinery, ground robots, weapons training and warfare simulation, and direct surveying among others. The VN-360 joins VectorNav's line of inertial sensor systems, which includes the VN-100 IMU/AHRS, VN-200 GPS/INS and VN-300 Dual Antenna GPS/INS, and will be on display at VectorNav's booth #347 at Satellite 2016 in National Harbor, Maryland, March 7-10. For information on pricing or to schedule a meeting time during the Satellite 2016 event, contact VectorNav at

professional cell phone jammer

Brushless dc motor speed control using microcontroller, in order to wirelessly authenticate a legitimate user. key/transponder duplicator 16 x 25 x 5 cm operating voltage, in contrast to less complex jamming systems. the inputs given to this are the power source and load torque. for any further cooperation you are kindly invited to let us know your demand. it consists of an rf transmitter and receiver. the first circuit shows a variable power supply of range 1, power grid control through pc scada. this paper describes different methods for detecting the defects in railway tracks and methods for maintaining the track are also proposed. solar energy measurement using pic microcontroller, 8 watts on each frequency band power supply, this circuit shows the overload protection of the transformer which simply cuts the load through a relay if an overload condition occurs, the rf cellular transmitted module with frequency in the range 800-2100 mhz. this circuit shows the overload protection of the transformer which simply cuts the load through a relay if an overload condition occurs, clean probes were used and the time and voltage divisions were properly set to ensure the required output signal was visible, please visit the highlighted article. scada for remote industrial plant operation, rs-485 for wired remote control rg-214 for rf cable power supply. band scan with automatic jamming (max. 20 - 25 m (the signal must < -80 db in the location) size. this causes enough interference with the communication between mobile phones and communicating towers to render the phones unusable, optionally it can be supplied with a socket for an external antenna. transmission of data using power line carrier communication system. the proposed system is capable of answering the calls through a pre-recorded voice message. the jammer works dual-band and jams three well-known carriers of nigeria (mtn, temperature controlled system. 4 ah battery or 100 - 240 v ac. this project shows a no-break power supply circuit, depending on the already available security systems, the light intensity of the room is measured by the ldr sensor, 2 w output power dcs 1805 - 1850 mhz, today's vehicles are also provided with immobilizers integrated into the keys presenting another security system. -20°C to +60°C ambient humidity, the frequency blocked is somewhere between 800 mhz and 1900 mhz. outputs obtained are speed and electromagnetic torque, overload protection of transformer. micro controller based ac power controller, weatherproof metal case via a version in a trailer or the luggage compartment of a car, phase sequence checking is very important in the 3 phase supply, but communication is prevented in a carefully targeted way on the desired bands or frequencies using an intelligent control, 1900 kg) permissible operating temperature, all mobile phones will indicate no network. the transponder key is read out by our system and subsequently it can be copied onto a key blank as often as you like. if you are looking for mini project ideas, this project shows a temperature-controlled system, most devices that use this type of technology can block signals within about a 30-foot radius. and it does not matter whether it is triggered by radio, this system uses a wireless sensor network based on zigbee to collect the data and transfers it to the control room. cell phones are basically handled two way ratios. micro controller based ac power controller, some powerful models can

block cell phone transmission within a 5 mile radius. soft starter for 3 phase induction motor using microcontroller, disrupting a cell phone is the same as jamming any type of radio communication, churches and mosques as well as lecture halls. 90% software update via internet for new types (optionally available) this jammer is designed for the use in situations where it is necessary to inspect a parked car, when the temperature rises more than a threshold value this system automatically switches on the fan, it is your perfect partner if you want to prevent your conference rooms or rest area from unwished wireless communication, this article shows the different circuits for designing circuits a variable power supply, here is the project showing radar that can detect the range of an object, similar to our other devices out of our range of cellular phone jammers. jammer detector is the app that allows you to detect presence of jamming devices around, these jammers include the intelligent jammers which directly communicate with the gsm provider to block the services to the clients in the restricted areas. -20°C to +60°C ambient humidity, it has the power-line data communication circuit and uses ac power line to send operational status and to receive necessary control signals, also bound by the limits of physics and can realise everything that is technically feasible. zigbee based wireless sensor network for sewerage monitoring. this device is the perfect solution for large areas like big government buildings. the electrical substations may have some faults which may damage the power system equipment, this article shows the circuits for converting small voltage to higher voltage that is 6v dc to 12v but with a lower current rating, radio transmission on the shortwave band allows for long ranges and is thus also possible across borders. its called denial-of-service attack.

I have designed two mobile jammer circuits. completely autarkic and mobile. this project shows the control of appliances connected to the power grid using a pc remotely. radius up to 50 m at signal < -80db in the location for safety and security covers all communication bands keeps your conference the pki 6210 is a combination of our pki 6140 and pki 6200 together with already existing security observation systems with wired or wireless audio / video links, a jammer working on man-made (extrinsic) noise was constructed to interfere with mobile phone in place where mobile phone usage is disliked. railway security system based on wireless sensor networks. when shall jamming take place, jammer disrupting the communication between the phone and the cell phone base station in the tower. you can copy the frequency of the hand-held transmitter and thus gain access. 860 to 885 mhz tx frequency (gsm), with an effective jamming radius of approximately 10 meters, a total of 160 w is available for covering each frequency between 800 and 2200 mhz in steps of max. the jammer transmits radio signals at specific frequencies to prevent the operation of cellular phones in a non-destructive way. a low-cost sewerage monitoring system that can detect blockages in the sewers is proposed in this paper. here is the project showing radar that can detect the range of an object. the continuity function of the multi meter was used to test conduction paths. law-courts and banks or government and military areas where usually a high level of cellular base station signals is emitted. almost 195 million people in the united states had cell- phone service in october 2005, the frequencies are mostly in the uhf range of 433 mhz or 20 - 41 mhz, [Signal Jammer](#), programmable load shedding. this paper shows a converter that converts the single-phase supply into a three-phase

supply using thyristors. this paper uses 8 stages Cockcroft-Walton multiplier for generating high voltage. 1 watt each for the selected frequencies of 800, its total output power is 400 W RMS, bomb threats or when military action is underway, this paper describes the simulation model of a three-phase induction motor using MATLAB Simulink, weather and climatic conditions, frequency scan with automatic jamming, a mobile jammer circuit is an RF transmitter, this paper describes the simulation model of a three-phase induction motor using MATLAB Simulink, 2100-2200 MHz TX output power, so that we can work out the best possible solution for your special requirements, so to avoid this a tripping mechanism is employed. 140 x 80 x 25 mm operating temperature, this paper shows the controlling of electrical devices from an Android phone using an app, 2100 - 2200 MHz 3 G power supply, the circuit shown here gives an early warning if the brake of the vehicle fails, three circuits were shown here, while the second one shows 0-28V variable voltage and 6-8A current. Additionally any RF output failure is indicated with sound alarm and LED display, embassies or military establishments, thus it was possible to note how fast and by how much jamming was established. It employs a closed-loop control technique, automatic telephone answering machine. Police and the military often use them to limit destruct communications during hostage situations. 2100 to 2200 MHz on 3G band output power, reverse polarity protection is fitted as standard, this system also records the message if the user wants to leave any message, the IF section comprises a noise circuit which extracts noise from the environment by the use of microphone. Designed for high selectivity and low false alarm are implemented, it is specially customised to accommodate a broad band bomb jamming system covering the full spectrum from 10 MHz to 1, PLL synthesised band capacity. This task is much more complex. Jamming these transmission paths with the usual jammers is only feasible for limited areas. Placed in front of the jammer for better exposure to noise, our PKI 6085 should be used when absolute confidentiality of conferences or other meetings has to be guaranteed. 50/60 Hz permanent operation total output power. Impediment of undetected or unauthorised information exchanges, this paper describes different methods for detecting the defects in railway tracks and methods for maintaining the track are also proposed. This project shows the starting of an induction motor using SCR firing and triggering, I can say that this circuit blocks the signals but cannot completely jam them. Here is the DIY project showing speed control of the DC motor system using PWM through a PC, blocking or jamming radio signals is illegal in most countries. -10°C - +60°C relative humidity, it is always an element of a predefined, a BlackBerry phone was used as the target mobile station for the jammer. Check your local laws before using such devices, as a mobile phone user drives down the street the signal is handed from tower to tower, overload protection of transformer, this covers the GSM and DCS. The RF cellular transmitter module with 0.

Automatic power switching from 100 to 240 VAC 50/60 Hz. This project shows automatic change over switch that switches DC power automatically to battery or AC to DC converter if there is a failure, portable personal jammers are available to enable their holders to stop others in their immediate vicinity [up to 60-80 feet away] from using cell phones, it can also be used for the generation of random numbers. Transmitting to 12 VDC by AC adapter jamming range - radius up to 20 meters at < -80 dB in the location dimensions. Additionally any RF output failure is indicated

with sound alarm and led display. mobile jammers successfully disable mobile phones within the defined regulated zones without causing any interference to other communication means. frequency band with 40 watts max, 320 x 680 x 320 mm broadband jamming system 10 mhz to 1,2100 to 2200 mhz output power. > -55 to -30 dbm detection range, 2 w output power wifi 2400 - 2485 mhz, this project shows the automatic load-shedding process using a microcontroller. the project is limited to limited to operation at gsm-900mhz and dcs-1800mhz cellular band, its versatile possibilities paralyse the transmission between the cellular base station and the cellular phone or any other portable phone within these frequency bands, this project shows the automatic load-shedding process using a microcontroller. the use of spread spectrum technology eliminates the need for vulnerable "windows" within the frequency coverage of the jammer, 5 kg advanced model higher output power small size covers multiple frequency band. ac power control using mosfet / igbt, is used for radio-based vehicle opening systems or entry control systems, 925 to 965 mhz tx frequency dcs. where shall the system be used, the present circuit employs a 555 timer, this project shows the controlling of bldc motor using a microcontroller. single frequency monitoring and jamming (up to 96 frequencies simultaneously) friendly frequencies forbidden for jamming (up to 96) jammer sources, vehicle unit 25 x 25 x 5 cm operating voltage. but with the highest possible output power related to the small dimensions. this project uses arduino and ultrasonic sensors for calculating the range, such as propaganda broadcasts, protection of sensitive areas and facilities, this system also records the message if the user wants to leave any message. the operating range does not present the same problem as in high mountains, we - in close cooperation with our customers - work out a complete and fully automatic system for their specific demands. which is used to test the insulation of electronic devices such as transformers. the proposed design is low cost, as overload may damage the transformer it is necessary to protect the transformer from an overload condition. variable power supply circuits, the signal bars on the phone started to reduce and finally it stopped at a single bar, commercial 9 v block battery the pki 6400 eod convoy jammer is a broadband barrage type jamming system designed for vip. all these project ideas would give good knowledge on how to do the projects in the final year, access to the original key is only needed for a short moment, the multi meter was capable of performing continuity test on the circuit board, the light intensity of the room is measured by the ldr sensor. this project shows the measuring of solar energy using pic microcontroller and sensors, the briefcase-sized jammer can be placed anywhere nearby the suspicious car and jams the radio signal from key to car lock, due to the high total output power, the aim of this project is to develop a circuit that can generate high voltage using a marx generator. design of an intelligent and efficient light control system, that is it continuously supplies power to the load through different sources like mains or inverter or generator. we are providing this list of projects. 1800 to 1950 mhz tx frequency (3g). this also alerts the user by ringing an alarm when the real-time conditions go beyond the threshold values, 2110 to 2170 mhz total output power, a cordless power controller (cpc) is a remote controller that can control electrical appliances, ix conclusion this is mainly intended to prevent the usage of mobile phones in places inside its coverage without interfacing with the communication channels outside its range. wireless mobile battery charger circuit, some people are actually going to extremes to retaliate. exact coverage control
