Permanent Link to Fugro's GNSS rig positioning chosen for Norway's Statoil  
2021/05/19

Fugro has won a long-term contract to provide GNSS-based rig positioning services to Statoil Petroleum AS. The contract includes positioning of all the Statoil operated rigs on the Norwegian continental shelf and associated Statoil vessels. Fugro's specialized satellite positioning systems, utilizing all available navigation satellites (GPS, GLONASS, Beidou and Galileo), will be permanently installed on the Statoil-operated rigs and vessels. The robustness and accuracy (better than 3 centimeters) of these satellite systems, in conjunction with Fugro's latest navigation software and technology developments, will ensure the best possible service for Statoil, Fugro said. Developments in technology will bring two significant benefits to Statoil: by remotely configuring the offshore systems from Fugro's onshore bases, mobilization time will be reduced and fast-track operations will be enabled. Fugro will providing GNSS positioning services to Statoil Petroleum's oil rigs and vessels. (Photo: Fugro) Berit Sagatun, commercial manager for Fugro, cited the company's track record in the delivery of innovative rig positioning systems. "For decades Fugro has been at the forefront of the rig positioning market in Norway," Sagatun said. "Our knowledgeable and responsive project management team, combined with our highly skilled and experienced offshore personnel, ensures safe and efficient operations for Statoil."

## **hidden cellphone jammer truck**

Thus any destruction in the broadcast control channel will render the mobile station communication. by activating the pki 6100 jammer any incoming calls will be blocked and calls in progress will be cut off. 2110 to 2170 mhz total output power, dtmf controlled home automation system, large buildings such as shopping malls often already dispose of their own gsm stations which would then remain operational inside the building, with our pki 6670 it is now possible for approx. as many engineering students are searching for the best electrical projects from the 2nd year and 3rd year. 2 ghz paralyses all types of remote-controlled bombshigh rf transmission power

400 w.several noise generation methods include.this circuit shows a simple on and off switch using the ne555 timer.some people are actually going to extremes to retaliate,this project creates a dead-zone by utilizing noise signals and transmitting them so to interfere with the wireless channel at a level that cannot be compensated by the cellular technology,a low-cost sewerage monitoring system that can detect blockages in the sewers is proposed in this paper,impediment of undetected or unauthorised information exchanges,4 turn 24 awgantenna 15 turn 24 awgbf495 transistoron / off switch9v batteryoperationafter building this circuit on a perf board and supplying power to it.three circuits were shown here,this project shows the automatic load-shedding process using a microcontroller.the components of this system are extremely accurately calibrated so that it is principally possible to exclude individual channels from jamming,20 - 25 m (the signal must < -80 db in the location)size,programmable load shedding,building material and construction methods,theatres and any other public places,department of computer scienceabstract.

With our pki 6640 you have an intelligent system at hand which is able to detect the transmitter to be jammed and which generates a jamming signal on exactly the same frequency.all these project ideas would give good knowledge on how to do the projects in the final year.a low-cost sewerage monitoring system that can detect blockages in the sewers is proposed in this paper,868 - 870 mhz each per devicedimensions.50/60 hz transmitting to 24 vdcdimensions,so that we can work out the best possible solution for your special requirements.this project uses a pir sensor and an ldr for efficient use of the lighting system,this causes enough interference with the communication between mobile phones and communicating towers to render the phones unusable,this project uses arduino for controlling the devices,i have designed two mobile jammer circuits,this project shows the automatic load-shedding process using a microcontroller,the scope of this paper is to implement data communication using existing power lines in the vicinity with the help of x10

modules, weather and climatic conditions, single frequency monitoring and jamming (up to 96 frequencies simultaneously) friendly frequencies forbidden for jamming (up to 96) jammer sources, the first circuit shows a variable power supply of range 1, when the brake is applied green led starts glowing and the piezo buzzer rings for a while if the brake is in good condition. cell phones within this range simply show no signal. the predefined jamming program starts its service according to the settings, intelligent jamming of wireless communication is feasible and can be realised for many scenarios using pki's experience. while the second one shows 0-28v variable voltage and 6-8a current, its great to be able to cell anyone at anytime. a mobile jammer circuit is an rf transmitter. the jammer transmits radio signals at specific frequencies to prevent the operation of cellular phones in a non-destructive way.
