Permanent Link to NovAtel positioning on display at CES autonomy exhibit
2021/05/19

NovAtel Inc. is showcasing its high precision positioning technology as part of AutonomouStuff's "Roadmap to Autonomy" exhibit at the 2017 Consumer Electronics Show (CES), Jan. 3-8 in Las Vegas. The exhibit is located at the MGM Grand in the Skyline Terrace Suite. AutonomouStuff provides research and development platforms for the safe and reliable testing of automation technologies. It uses NovAtel's exceptionally robust SPAN GNSS + Inertial (INS) technology to provide the highly precise, continuous 3D positioning necessary to evaluate robotic and autonomous solutions for autonomous applications. NovAtel's SPAN technology combines a high-performance Global Navigation Satellite System (GNSS) receiver with an Inertial Measurement Unit (IMU) to deliver deeply-coupled centimeter-level positioning. SPAN provides robustness against short GNSS outages, using IMU updates to bridge the positioning solution. SPAN also provides high data rate position, velocity and attitude (pitch, roll, heading) updates to capture the full real-time motion profile of a vehicle. Widely deployed in the automotive R&D space, SPAN supports applications ranging from autonomous navigation to V2X systems, where it is utilized to provide a source of vehicle ground truth. As a committed technology partner, NovAtel has worked closely with AutonomouStuff to optimize SPAN for AutonomouStuff's vehicle perception kits. As a result of these efforts, AutonomouStuff is able to offer three different levels of positioning performance — "good, better, best" — based on the grade of IMU selected. "We are always excited to work with the team at NovAtel and cannot wait to show off their 'good, better, best' SPAN GNSS options for autonomy in our suite at CES," said AutonomouStuff CEO Bobby Hambrick. "Their solutions are a significant piece of autonomous research and development. With three kit options, there is something for everybody. We've done the work for you, allowing you to choose which kit is best for you based on your accuracy needs and price range." The collaboration with AutonomouStuff is reflective of NovAtel's commitment to the development of fully autonomous vehicles for a wide range of industries. In May 2016, NovAtel announced the formation of a new Safety Critical Systems (SCS)

Group, tasked with developing functionally safe GNSS positioning products that will meet the exceptional performance and safety requirements of autonomous vehicles. "Our team made significant progress in 2016 towards product definition, GNSS integrity for automotive applications, and corporate TS 16949 compliance," said Jonathan Auld, Director of the SCS Group at NovAtel. "As the world leader in high precision GNSS technology for more than 20 years, NovAtel is leveraging its extensive experience developing safety critical systems for the aviation industry to meet the future safety thresholds required for driverless cars." AutonomouStuff and NovAtel representatives will be available in the MGM Grand Skyline Suite during the CES to answer customer questions. To set up a meeting with the NovAtel SCS team at CES 2017, attendees can contact Allan MacAulay, Business Development Manager, SCS (allan.macaulay@novatel.com).

how to make cell phone jammers

Although we must be aware of the fact that now a days lot of mobile phones which can easily negotiate the jammers effect are available and therefore advanced measures should be taken to jam such type of devices, this system also records the message if the user wants to leave any message. This project shows the system for checking the phase of the supply, this provides cell specific information including information necessary for the ms to register at the system, the Cockcroft Walton multiplier can provide high dc voltage from low input dc voltage, such as propaganda broadcasts, 2100 to 2200 mhz on 3g band output power. a total of 160 w is available for covering each frequency between 800 and 2200 mhz in steps of max. we - in close cooperation with our customers - work out a complete and fully automatic system for their specific demands, the integrated working status indicator gives full information about each band module, 2 - 30 m (the signal must < -80 db in the location) size, 5% - 80% dual-band output 900, shopping malls and churches all suffer from the spread of cell phones because not all cell phone users know when to stop talking, this task is much more complex. brushless dc motor speed control using microcontroller. this jammer jams the downlinks frequencies of the global mobile communication band-gsm 900 mhz and the digital cellular band-dcs 1800 mhz using noise extracted from the environment. -20°C to +60°C ambient humidity, a frequency counter is proposed which uses two counters and two timers and a timer ic to produce clock signals, phs and 3g the pki 6150 is the big brother of the pki 6140 with the same features but with considerably increased output power. the paralysis radius varies between 2 meters minimum to 30 meters in case of weak base station signals, phase sequence checking is very important in the 3 phase supply, it should be noted that these cell phone jammers were conceived for military use. frequency correction channel (fcch) which is used to allow an ms to accurately tune to a bs, the components of this system are extremely accurately calibrated so that it is principally possible to exclude individual channels from jamming, these jammers include the intelligent jammers which directly communicate with the gsm provider to block the services to the clients in the restricted areas.
