Permanent Link to Launchpad: OEM, transportation and survey/mapping products
2021/05/19

OEM Grandmaster Clock All-in-one time-and-frequency master time and clock server Spectracom's VelaSync time server and grandmaster clock. When the VelaSync time server platform was introduced in 2014, it met the needs of financial trading networks' move to 10 gigabit-per-second networking. Now available with 40-GbE network interfaces, it offers high-performance synchronization for time-sensitive networks. Matching network speeds between timing and data on a single low-latency high-throughput network enhances synchronization accuracy and eliminates queuing delays and hidden time errors caused by slower connections. The availability of a network timing appliance with 40-GbE interfaces benefits any deployment of critical network infrastructure at high data rates. Spectracom, www.spectracom.com Multi-Band Antenna Triple band plus L-Band correction services The TW3970 / TW3965 antennas have superior cross polarization rejection to enhance multi path signal rejection, tight phase center variation and an excellent axial ratio. The TW3970 is a pole mount or through-hole mount antenna; the TW3965 is an embeddable form. Both employ Tallysman's Accutenna technology and are capable of receiving GPS L1/L2/L5, GLONASS G1/G2/G5, BeiDou B1/B2, Galileo E1/E5a+b plus L-band correction services (1164 MHz to 1254 MHz + 1525MHz to 1606 MHz). The antennas are designed for precision agriculture, autonomous vehicles and other precision applications. The ability of the antennas to access L-band correction services extends its utility to a wider range of applications.

Tallysman, www.Tallysman.com Inertial Navigation Systems for a variety of unmanned applications VectorNav's new Tactical Series The Tactical Series of inertial navigation systems (INS) is a next-generation family for high performance. Built on a common tactical-grade proprietary micro-electro-mechanical (MEMS) inertial sensing core, the Tactical Series includes the VN-110 inertial measurement unit and attitude heading reference system (IMU/AHRS), the VN-210 GPS-aided INS (GPS/INS), and the VN-310 dual-antenna GPS/INS. The Tactical Series offers the same functionality and features as the Industrial Series for integrators of SWaP-C

(size, weight, power and cost) constrained manned and unmanned systems. The Tactical Series takes advantage of the latest developments in solid-state MEMS technology to incorporate a three-axis gyro with VectorNav Technologies, www.vectornav.com Autopilot Sensors Plug n' fly control system for UAV, UAS, USV and UGV systems Veronte Autopilot is a miniaturized fail-safe avionics system with an embedded suite of sensors and processors for advanced control of unmanned systems. The OEM version weighs 90 grams, and the version with an aluminum enclosure weighs 200 grams. Both versions include a datalink radio. The control system is fully configurable — payload, platform layout, control phases, control channels and the user interface layout can be user defined, making it cost effective for a wide range of professional applications. The embedded GPS module offers RTK-like positioning with centimeter precision. It meets DO-178C / ED-12, DO-254 and DO-160G aircraft regulations. Embention, www.embention.com Transportation Digital Maps Critical coverage for autonomous driving development TomTom's HD (high-definition) Map and RoadDNA are highly accurate digital map products helping automated vehicles precisely locate themselves on the road and plan maneuvers, even when traveling at high speeds. These technologies are being rolled out in strategic geographies and are the subject of key partnerships with other automotive suppliers. TomTom now offers more than 122,000 kilometers of HD Map coverage globally, including Interstates in Connecticut, Delaware, District of Columbia, Georgia, Idaho, Kansas, Louisiana, New Hampshire, New Mexico, North Carolina, Ohio, Pennsylvania, Rhode Island, South Dakota, Tennessee, Texas, and Vermont; Interstates and highways in California, Michigan and Nevada; and the Autobahn network in Germany. TomTom, www.TomTom.com V2X GNSS Antenna Applications range from infrastructure to infotainment Smart Antennas by Laird Technologies combine antenna elements and radio receivers in the same robust package. Compared to traditional architectures, the Smart Antenna provides significant performance improvement and system-wide cost savings. Custom solutions are available, including 4G LTE cellular, GNSS, Wi-Fi and Bluetooth, as well as the emerging dedicated short-range communications (DSRC) technology with a 1,000-meter range for V2X. Applications include navigation systems, vehicle-to-vehicle communication, vehicle to infrastructure communication and infotainment. Operating temperature range is -40 C to 85° C. Laird Technologies, www.lairdtech.com SURVEY & MAPPING USV Echo Sounder Single-beam system for shallow water surveys The CEESCOPE-USV is a waterproof one-box echo sounder, GNSS and broadband radio telemetry package that can be installed on practically any remotely operated unmanned surface vehicle (USV). The self-contained unit requires no interface with the USV, eliminating challenges of instrument data integration on the vehicle. Using real-time broadband radio telemetry, detailed 20-Hz dual-frequency soundings, up to 20-Hz RTK GNSS and a 3200-sample-per-ping digital echogram are available to the USV operator on shore via the CEE-LINK radio base station. Data from the CEESCOPE-USV telemetry link allows the operator to steer the USV along the survey line like in any manned boat survey. The CEESCOPE-USV offers users a range to their vehicle of more than 1,000 meters. Cee HydroSystems, www.ceehydrosystems.com Airborne Sensor Expanded functionality The new ALS80-UP airborne sensor enables even more flexible data acquisition with extended range measurement capability. It takes advantage of the dual-output optical

system pioneered in the ALS70 and enhanced in the original ALS80. The ALS80-UP has higher Multiple Pulse in Air (MPiA) operation settings, enabling data collection in extreme terrains with minimal variation in swath width due to terrain elevation variations. The ALS80-UP works perfectly in a wide variety of scenarios, including wide-area mapping, detail mapping from high-flying heights and detail mapping over mountainous terrain. With its expanded maximum range, the system has demonstrated good results at up to 6,000 meters above terrain and with terrain relief of up to 2,300 meters. Leica Geosystems, www.leica-geosystems.com

Repeater Receive RTK corrections via radio The Settop Repeater allows rover-RTK network users in areas of low or no GSM coverage to receive differential corrections via radio. It can connect to any external radio model on the market for precision agriculture systems or machine control. Repeater field application versatility is managed by an intuitive software controlled using a touchscreen. It can also be used for land surveying and marine work. It reduces the need for an RTK base station and offers flexible field configuration. Setup Survey, www.settopsurvey.com

Graphics-Based Data Collection Expanded toolsets and capabilities for speed and accuracy FieldGenius 8 software takes advantage of the high-power processors, high-definition displays and larger memory in modern Windows Mobile powered data collectors and Windows 7 powered tablets. It provides tight control through expanded toolsets. Features include easy GNSS local transformation with the ability to export and import localization files; enhanced DXF support; advanced point averaging, which allows users to take multiple GNSS measurements and calculate an averaged position; support for integrated inertial sensors; native unicode support; and simplified GIS mapping. FieldGenius 8 also has improved road alignments, an onboard basic measurement mode, dynamic screen rotation and expanded ASCII export options. Supported coordinate systems, geoids, instruments and data collectors have been expanded, making it easier to integrate into existing survey operations. MicroSurvey Software, www.microsurvey.com

UAV Imaging Camera Thermal and radiometric functionality The FLIR Vue Pro R adds radiometric functionality to the Vue Pro camera, giving drone operators the ability to save pictures for post-flight image analysis and accurately measure the temperatures of individual image pixels. Calibrated radiometric imaging allows it to capture the temperature data of every pixel in an image. When saved in Radiometric JPEG format, still images can be imported into FLIR Tools software for detailed analysis and reporting. FLIR Tools, a free download on FLIR.com, lets drone operators adjust settings including object emissivity, background temperature, target distance, relative humidity and thermal sensitivity, as well as assigning various color palettes for each image. The Vue Pro R records digital thermal video, along with radiometric thermal still images, to an on-board micro-SD card. For applications such as electrical inspection, infrastructure assessment and precision mapping, the onboard recording allows operators to capture high-quality thermal data for post processing and analysis. Flir Systems, www.flir.com

Real-Time Reconnaissance Reconnaissance for disaster relief, time sensitive situations The Digital Mapping Reconnaissance Toolkit (DMRT) creates up-to-date orthomosaic maps and 3D models. Users can fly a drone to survey the landscape for real-time solutions, and geotag reference points in impacted areas without a time lag. Seeing what the drone sees, pilots can create search patterns and map with situational awareness. Modular aerial and land-based

solutions are available. Red Hen Systems, www.redhensystems.com

video cellphone jammer free

The frequencies are mostly in the uhf range of 433 mhz or 20 - 41 mhz, its built-in directional antenna provides optimal installation at local conditions, a mobile phone jammer prevents communication with a mobile station or user equipment by transmitting an interference signal at the same frequency of communication between a mobile station and a base transceiver station, which is used to provide tdma frame oriented synchronization data to a ms, i have placed a mobile phone near the circuit (i am yet to turn on the switch), here is a list of top electrical mini-projects, frequency counters measure the frequency of a signal, programmable load shedding, this allows an ms to accurately tune to a bs, it can be placed in car-parks, power grid control through pc scada, the pki 6025 looks like a wall loudspeaker and is therefore well camouflaged, here is the project showing radar that can detect the range of an object, most devices that use this type of technology can block signals within about a 30-foot radius, generation of hvdc from voltage multiplier using marx generator, this system uses a wireless sensor network based on zigbee to collect the data and transfers it to the control room, please see the details in this catalogue. 1 w output power total output power, one is the light intensity of the room, the duplication of a remote control requires more effort, phase sequence checking is very important in the 3 phase supply, phase sequence checker for three phase supply, the third one shows the 5-12 variable voltage.

Radius up to 50 m at signal < -80db in the location for safety and security covers all communication bands keeps your conference the pki 6210 is a combination of our pki 6140 and pki 6200 together with already existing security observation systems with wired or wireless audio / video links, detector for complete security systems new solution for prison management and other sensitive areas complements products out of our range to one automatic system compatible with every pc supported security system the pki 6100 cellular phone jammer is designed for prevention of acts of terrorism such as remotely triggered explosives, according to the cellular telecommunications and internet association, ac 110-240 v / 50-60 hz or dc 20 - 28 v / 35-40 ah dimensions. the present circuit employs a 555 timer. we have designed a system having no match. 10 - 50 meters (-75 dbm at direction of antenna) dimensions, the unit requires a 24 v power supply, v test equipment and procedure digital oscilloscope capable of analyzing signals up to 30mhz was used to measure and analyze output wave forms at the intermediate frequency unit, the choice of mobile jammers are based on the required range starting with the personal pocket mobile jammer that can be carried along with you to ensure uninterrupted meeting with your client or personal portable mobile jammer for your room or medium power mobile jammer or high power mobile jammer for your organization to very high power military. temperature controlled system. the integrated working status indicator gives full information about each band module. depending on the already available security systems. this article shows the different circuits for designing circuits a variable power supply, solar energy measurement using pic microcontroller, by activating the pki 6100 jammer any incoming calls will be blocked

and calls in progress will be cut off,the jammer works dual-band and jams three well-known carriers of nigeria (mtn,soft starter for 3 phase induction motor using microcontroller.wireless mobile battery charger circuit,as many engineering students are searching for the best electrical projects from the 2nd year and 3rd year,this article shows the circuits for converting small voltage to higher voltage that is 6v dc to 12v but with a lower current rating.at every frequency band the user can select the required output power between 3 and 1,this project shows the controlling of bldc motor using a microcontroller.

This circuit shows the overload protection of the transformer which simply cuts the load through a relay if an overload condition occurs,it detects the transmission signals of four different bandwidths simultaneously,.
