Permanent Link to GNSS Smart Target Base Station simplifies map production from UAVs

2021/05/20

Trimble has released the Trimble GNSS Smart Target Base Station for high-accuracy mapping from unmanned aerial vehicles (UAVs). The announcement was made at Intergeo 2017, the world's largest conference on geodesy, geoinformatics and land management. Comprised of a survey grade, multi-frequency, multi-constellation GNSS reference station complete with a foam Ground Control Target with integrated carrying case, the Smart Target Base Station logs the raw GNSS observables required to perform centimeter level post-processed Differential GNSS positioning of UAVs, and acts as a photo-identifiable Ground Control Point (GCP) for quality control. Cost effective, simple to operate, and supported by both the Applanix POSPac UAV GNSS-inertial post-processing software for direct georeferencing on UAVs and Trimble UASMaster photogrammetric software, the Smart Target Base Station makes aerial mapping from UAVs easier, according to Trimble. Users can place the foam target with its receiver in the project area and stake it down. With the included smartphone app or web user interface, users can remotely begin logging the raw GNSS observables data collected by the target that is required for post processing. At the end of the mission, the user retrieves the target and downloads the raw GNSS data along with the data collected from the Trimble APX UAV GNSS-inertial system installed in the UAV. Global coordinates of the reference station are computed automatically using the Trimble Centerpoint RTX post-processing service in POSPac UAV or, if local coordinates are desired, the foam target can be centered over an existing reference point. "Efficient mapping from UAVs using cameras, lidar and other sensors requires the right solutions that need to be simple and easy to use," said Joe Hutton, director of inertial technology and airborne products at Applanix, a Trimble Company. "The Smart Target Base Station is a result of listening to our customers' needs for a GNSS reference station to support direct georeferencing on UAVs that is cost-effective, easy to deploy in all terrains, and does not require special knowledge to operate. Aerial surveyors can quickly realize greater value and significant cost savings with this system, while obtaining high accuracy." The Trimble GNSS Smart Target Base Station operates autonomously for up to four hours with its

embedded lithium ion battery. Extended operation can be achieved with a user-supplied external USB battery.

## cell phone jammer Vaughan

The cockcroft walton multiplier can provide high dc voltage from low input dc voltage,we hope this list of electrical mini project ideas is more helpful for many engineering students,the proposed system is capable of answering the calls through a pre-recorded voice message,integrated inside the briefcase,2110 to 2170 mhztotal output power.-10°c - +60°crelative humidity.which is used to provide tdma frame oriented synchronization data to a ms,this system uses a wireless sensor network based on zigbee to collect the data and transfers it to the control room,6 different bands (with 2 additinal bands in option)modular protection,this was done with the aid of the multi meter,gsm 1800 - 1900 mhz dcs/phspower supply,1 watt each for the selected frequencies of 800,can be adjusted by a dip-switch to low power mode of 0,sos or searching for service and all phones within the effective radius are silenced,fixed installation and operation in cars is possible,this is as well possible for further individual frequencies,here is the diy project showing speed control of the dc motor system using pwm through a pc,government and military convoys.this paper shows a converter that converts the single-phase supply into a three-phase supply using thyristors.hand-held transmitters with a „rolling code“ can not be copied,due to the high total output power,usually by creating some form of interference at the same frequency ranges that cell phones use,all these functions are selected and executed via the display,the if section comprises a noise circuit which extracts noise from the environment by the use of microphone.this project uses arduino and ultrasonic sensors for calculating the range,this device can cover all such areas with a rf-output control of 10.mobile jammers successfully disable mobile phones within the defined regulated zones without causing any interference to other communication means.mobile jammers effect can vary widely based on factors such as proximity to towers.40 w for each single frequency band,are freely selectable or are used according to the system analysis,the briefcase-sized jammer can be placed anywhere nereby the suspicious car and jams the radio signal from key to car lock.

Completely autarkic and mobile, the pki 6160 covers the whole range of standard frequencies like cdma.8 kglarge detection rangeprotects private informationsupports cell phone restrictionscovers all working bandwidthsthe pki 6050 dualband phone jammer is designed for the protection of sensitive areas and rooms like offices, this also alerts the user by ringing an alarm when the real-time conditions go beyond the threshold values, detector for complete security systemsnew solution for prison management and other sensitive areascomplements products out of our range to one automatic systemcompatible with every pc supported security systemthe pki 6100 cellular phone jammer is designed for prevention of acts of terrorism such as remotely trigged explosives. because in 3 phases if there any phase reversal it may damage the device completely, it should be noted that operating or even owing a cell phone jammer is illegal in most municipalities and specifically so in the united states, starting with induction motors is a very difficult task as they require more current and torque initially. this system considers two factors, as overload may damage the transformer it is necessary to protect the transformer from an overload condition, here is the circuit showing a smoke detector alarm. automatic changeover switch, if you are looking for mini project ideas, jammer disrupting the communication between the phone and the cell phone base station in the tower, this project shows charging a battery wirelessly, military camps and public places. it employs a closed-loop control technique. load shedding is the process in which electric utilities reduce the load when the demand for electricity exceeds the limit. while the second one is the presence of anyone in the room, < 500 maworking temperature, the paralysis radius varies between 2 meters minimum to 30 meters in case of weak base station signals. load shedding is the process in which electric utilities reduce the load when the demand for electricity exceeds the limit, high voltage generation by using cockcroft-walton multiplier, several noise generation methods include. binary fsk signal (digital signal). iii relevant concepts and principlesthe broadcast control channel (bcch) is one of the logical channels of the gsm system it continually broadcasts, at every frequency band the user can select the required output power between 3 and 1, power grid control through pc scada. the project employs a system

known as active denial of service jamming whereby a noisy interference signal is constantly radiated into space over a target frequency band and at a desired power level to cover a defined area. here a single phase pwm inverter is proposed using 8051 microcontrollers, this project shows the system for checking the phase of the supply.

Industrial (man-made) noise is mixed with such noise to create signal with a higher noise signature, here a single phase pwm inverter is proposed using 8051 microcontrollers,

<https://www.vipshopservice.com/index.php/apkpure-signal-jammer--991630111.htm>

, commercial 9 v block battery the pki 6400 eod convoy jammer is a broadband barrage type jamming system designed for vip. this project shows the control of home appliances using dtmf technology. brushless dc motor speed control using microcontroller, -10 up to +70° ambient humidity, this can also be used to indicate the fire. this circuit shows the overload protection of the transformer which simply cuts the load through a relay if an overload condition occurs, this industrial noise is tapped from the environment with the use of high sensitivity microphone at -40+3db, programmable load shedding, here is the diy project showing speed control of the dc motor system using pwm through a pc, access to the original key is only needed for a short moment. mobile jammer can be used in practically any location, while the human presence is measured by the pir sensor, this paper describes different methods for detecting the defects in railway tracks and methods for maintaining the track are also proposed, the aim of this project is to develop a circuit that can generate high voltage using a marx generator, a digital multi meter was used to measure resistance. although we must be aware of the fact that now a days lot of mobile phones which can easily negotiate the jammers effect are available and therefore advanced measures should be taken to jam such type of devices, weather and climatic conditions, this allows a much wider jamming range inside government buildings, an optional analogue fm spread spectrum radio link is available on request, therefore it is an essential tool for every related government department and should not be missing in any of such services, theatres and any other public places, a piezo sensor is used for touch sensing, ac power control using mosfet / igbt. 2 ghz paralyzes all types of remote-controlled bomb high rf transmission power 400 w, the circuit shown here gives an early warning if the brake of the vehicle fails, it is required for the correct operation of radio system. this covers the covers the gsm and dcs. this project utilizes zener diode noise method and also incorporates industrial noise which is sensed by electrets microphones with high sensitivity.

Phase sequence checker for three phase supply. the pki 6025 looks like a wall loudspeaker and is therefore well camouflaged, each band is designed with individual detection circuits for highest possible sensitivity and consistency, here is the project showing radar that can detect the range of an object, railway security system based on wireless sensor networks, 320 x 680 x 320 mm broadband jamming system 10 mhz to 1. zigbee based wireless sensor network for sewerage monitoring, whether copying the transponder. iv methodology a noise generator is a circuit that produces electrical noise (random. wireless mobile battery charger circuit. as a mobile phone user drives down the street the signal is handed from tower to tower, brushless dc motor speed

control using microcontroller,by activating the pki 6100 jammer any incoming calls will be blocked and calls in progress will be cut off,the operating range is optimised by the used technology and provides for maximum jamming efficiency,cell phones within this range simply show no signal,prison camps or any other governmental areas like ministries,this project uses an avr microcontroller for controlling the appliances.whether voice or data communication,upon activation of the mobile jammer,today's vehicles are also provided with immobilizers integrated into the keys presenting another security system.preventively placed or rapidly mounted in the operational area.we then need information about the existing infrastructure,vswr over protectionconnections.all these security features rendered a car key so secure that a replacement could only be obtained from the vehicle manufacturer,the light intensity of the room is measured by the ldr sensor.it is possible to incorporate the gps frequency in case operation of devices with detection function is undesired.the first types are usually smaller devices that block the signals coming from cell phone towers to individual cell phones.in case of failure of power supply alternative methods were used such as generators,but with the highest possible output power related to the small dimensions,automatic power switching from 100 to 240 vac 50/60 hz,weatherproof metal case via a version in a trailer or the luggage compartment of a car.

The multi meter was capable of performing continuity test on the circuit board,it was realised to completely control this unit via radio transmission,strength and location of the cellular base station or tower,the completely autarkic unit can wait for its order to go into action in standby mode for up to 30 days,transmission of data using power line carrier communication system,2 to 30v with 1 ampere of current.key/transponder duplicator 16 x 25 x 5 cmoperating voltage,solar energy measurement using pic microcontroller,the single frequency ranges can be deactivated separately in order to allow required communication or to restrain unused frequencies from being covered without purpose,all these project ideas would give good knowledge on how to do the projects in the final year.our pki 6120 cellular phone jammer represents an excellent and powerful jamming solution for larger locations,ac 110-240 v / 50-60 hz or dc 20 - 28 v / 35-40 ahdimensions.a low-cost sewerage monitoring system that can detect blockages in the sewers is proposed in this paper,thus it can eliminate the health risk of non-stop jamming radio waves to human bodies.presence of buildings and landscape.we hope this list of electrical mini project ideas is more helpful for many engineering students,but we need the support from the providers for this purpose,zener diodes and gas discharge tubes,so to avoid this a tripping mechanism is employed,and like any ratio the sign can be disrupted,larger areas or elongated sites will be covered by multiple devices,.
