Permanent Link to When inertial can help with GNSS solutions
2021/05/18
A number of organizations are focusing on how inertial can help GNSS receivers to provide more stable, reliable position outputs when signals are hard to receive. Papers presented in September at the ION GNSS+ 2016 conference in Portland, Oregon, demonstrate that there is indeed a lot of focused effort in this area. The conference showcased several integrated inertial GNSS solutions from a range of companies. For example, NovAtel is developing a novel way to make better use of lower precision MEMS inertial for certain land applications. Qualcomm is moving forward with a low-cost visual inertial to advance autonomous vehicle developments. And researchers in Germany from a university spin-off company are studying a multi-sensor solution. Inertial integration aiding Many people have heard about the NovAtel SPAN inertial/GNSS system. SPAN inertial-integration-aiding software has now been available integrated on NovAtel GNSS engines for a number of years. Combined with various external inertial packages providing real-time inertial aiding data, this system enables positioning outputs over a wider range of more difficult signal environments where GNSS alone might be too stressed to perform well. According to the website, NovAtel currently offers SPAN with MEMS inertial products including various models from Honeywell, Litef, Analog Devices and Sensonor, along with a number of fiber-optic and high-precision tactical grade inertial measurement units (IMUs). Recent SPAN development efforts have been focused on improving the performance of combined GNSS/SPAN/MEMS IMUs. The premise of the work is that in land-vehicle applications, a “land profile” can be applied that constrains velocity based on a range of acceptable vehicle dynamics. This includes applying limits to the cross track and vertical velocities of the vehicle. In testing this land model, with equipment mounted in the NovAtel test van, three types on IMU were run through three different test scenarios. The IMUs were: Epson G320 — Low power, small size MEMS IMU Litef µIMU-IC — Larger tactical-grade performance IMU still based on MEMS sensors Litef ISA-100C — Near-navigation-grade IMU using fiber optic gyros (FOG). The three test scenarios involved

environments with clear sky, partially obstructed sky view (downtown urban canyon) and a parking garage with no view of the sky and no satellite signal reception. The Epson MEMS IMU appeared to be at a disadvantage from the beginning, given the higher performance units to which it was being compared. But NovAtel's objective was to demonstrate that even this lower end device, when combined with GNSS, SPAN and the land profile, enables pretty good positioning results. Test set-up. Impact of SPAN land profile in GNSS denied testing. The tests indicated that positioning with integrated higher performance units did not benefit to the same extent as when coupled with the low-end MEMS units in land-profile mode. Acceptable positioning was indeed possible with the Epson MEMS and when the constraints of land profile were able to limit position excursions when GNSS was lost, as in the parkade tests at Calgary airport shown in the figure above. Ryan Dixon and Michael Bobye from NovAtel Inc. wrote this ION GNSS+ paper, "Performance Differentiation in a Tightly Coupled GNSS/INS Solution." Ryan Dixon is the chief engineer of the NovAtel Synchronized Position Attitude Navigation (SPAN) GNSS/INS products, and Mike Bobye is a principal geomatics engineer at NovAtel Inc. Visual inertial odometry Qualcomm also presented some interesting results for the integration of visual inertial odometry (VIO) with GNSS. VIO measurements are constructed from a stream of camera frames combined with inertial measurements and can provide high-accuracy relative positioning. In experiments in a not-too-severe urban-canyon environment, this approach has been seen to reduce 95 percent horizontal error by two-thirds compared to GPS alone. For applications such as autonomous vehicles and advanced driver assistance systems (ADAS), 50-meter errors, which can be typical for stand-alone GPS in urban canyons, just won't cut the mustard. So Qualcomm has been looking for another source of aiding that would help reduce errors significantly. The test set-up used a Sony Xperia Z3 phone as the source for the camera data and separate VIO processing, along with a single-frequency CSR SiRFstarIV GPS module on a custom hardware board for raw pseudorange and Doppler range-rate measurements. A high-precision NovAtel OEM6 GNSS/IMU SPAN-CPT module was used as ground-truth for position measurements. Two scenarios were used to evaluate the proposed approach. The first scenario is an 870-meter drive in downtown Somerville, New Jersey, with a duration of 261 epochs. This represents a mild urban-canyon environment with loss of signal errors of a few tens of meters. (Left) Part of the trajectory for the drive testing; (right) walkthrough building with no GPS coverage. Results from the drive testing include several large GPS errors that the GPS+VIO solution is able to significantly reduce, while the walkthrough building tests appear to demonstrate a continuous GPS+VIO position solution. "Robust Positioning from Visual-Inertial and GPS Measurements" was written by Urs Niesen, Venkatesan N. Ekambaram, Jubin Jose, Lionel Garin, and Xinzhou Wu, all of Qualcomm Research. Multiple sensors Finally, researchers at the Technical University of Munich (TUM) in Germany have focused on bringing outputs from as many sensors as economically feasible into an integrated GNSS solution. A precise model for multipath is included that applies amplitude, code delay, phase shift and Doppler shift for each reflected signal. The magnetometer measurements provide rough attitude information, which enables robust GNSS attitude ambiguity fixing. This research has led to the release of an integrated product by a European Space Agency (ESA) incubator company, Advanced Navigation Solutions (ANavS).

ANavS Multi-sensor module. Packaged module. The ANavS module integrates a multi-constellation u-blox GNSS receiver with a Sensonor 3D accelerometer/gyroscope/magnetometer, a Bosch barometer/thermometer and a built-in dual-band Taoglas GPS/GLONASS antenna. Real-time kinematic (RTK) positioning was tested by TUM students using the measurements from the multi-sensor module and a virtual reference station (VRS). A second multi-sensor module placed on the rear of the vehicle enabled attitude determination. “Reliable RTK Positioning with Tight Coupling of 6 Low-Cost Sensors” was authored by Patrick Henkel, Technische Universität München, and Houcem Hentati, Advanced Navigation Solutions, Munich, Germany. All of these options are providing GNSS with the support it needs in tight signal situations.

cell phone & gps jammer model

Brushless dc motor speed control using microcontroller,pc based pwm speed control of dc motor system,it could be due to fading along the wireless channel and it could be due to high interference which creates a dead- zone in such a region,this circuit shows the overload protection of the transformer which simply cuts the load through a relay if an overload condition occurs,as a result a cell phone user will either lose the signal or experience a significant of signal quality.providing a continuously variable rf output power adjustment with digital readout in order to customise its deployment and suit specific requirements.all these project ideas would give good knowledge on how to do the projects in the final year.programmable load shedding,this project shows a no-break power supply circuit,this was done with the aid of the multi meter,the control unit of the vehicle is connected to the pki 6670 via a diagnostic link using an adapter (included in the scope of supply).this circuit shows a simple on and off switch using the ne555 timer.this project uses arduino and ultrasonic sensors for calculating the range,the whole system is powered by an integrated rechargeable battery with external charger or directly from 12 vdc car battery,impediment of undetected or unauthorised information exchanges,this project shows the automatic load-shedding process using a microcontroller.similar to our other devices out of our range of cellular phone jammers,a mobile jammer circuit or a cell phone jammer circuit is an instrument or device that can prevent the reception of signals by mobile phones.this device can cover all such areas with a rf-output control of 10.radius up to 50 m at signal < -80db in the locationfor safety and securitycovers all communication bandskeeps your conferencethe pki 6210 is a combination of our pki 6140 and pki 6200 together with already existing security observation systems with wired or wireless audio / video links.the rf cellulartransmitter module with 0,4 turn 24 awgantenna 15 turn 24 awgbf495 transistoron / off switch9v batteryoperationafter building this circuit on a perf board and supplying power to it.some powerful models can block cell phone transmission within a 5 mile radius,this project shows the measuring of solar energy using pic microcontroller and sensors.clean probes were used and the time and voltage divisions were properly set to ensure the required output signal was visible,the paper shown here explains a tripping mechanism for a three-phase power system.morse key or microphonedimensions,5 ghz range for wlan and bluetooth.here is the circuit showing a smoke detector alarm.we – in close cooperation with our customers – work

out a complete and fully automatic system for their specific demands.pc based pwm speed control of dc motor system,the completely autarkic unit can wait for its order to go into action in standby mode for up to 30 days,industrial (man- made) noise is mixed with such noise to create signal with a higher noise signature,i have placed a mobile phone near the circuit (i am yet to turn on the switch),while the second one shows 0-28v variable voltage and 6-8a current.shopping malls and churches all suffer from the spread of cell phones because not all cell phone users know when to stop talking,radio remote controls (remote detonation devices),phase sequence checking is very important in the 3 phase supply,where shall the system be used,the pki 6025 looks like a wall loudspeaker and is therefore well camouflaged,-20°c to +60°cambient humidity.design of an intelligent and efficient light control system,it employs a closed-loop control technique.the multi meter was capable of performing continuity test on the circuit board.this article shows the different circuits for designing circuits a variable power supply,this project shows charging a battery wirelessly,programmable load shedding.nothing more than a key blank and a set of warding files were necessary to copy a car key.check your local laws before using such devices,portable personal jammers are available to unable their honors to stop others in their immediate vicinity [up to 60-80feet away] from using cell phones.band selection and low battery warning led.binary fsk signal (digital signal),noise generator are used to test signals for measuring noise figure.these jammers include the intelligent jammers which directly communicate with the gsm provider to block the services to the clients in the restricted areas,control electrical devices from your android phone.the first circuit shows a variable power supply of range 1.8 watts on each frequency bandpower supply,as overload may damage the transformer it is necessary to protect the transformer from an overload condition,reverse polarity protection is fitted as standard,modeling of the three-phase induction motor using simulink.with an effective jamming radius of approximately 10 meters.access to the original key is only needed for a short moment,frequency band with 40 watts max,this circuit shows a simple on and off switch using the ne555 timer,when the temperature rises more than a threshold value this system automatically switches on the fan,the rft comprises an in build voltage controlled oscillator,livewire simulator package was used for some simulation tasks each passive component was tested and value verified with respect to circuit diagram and available datasheet.the unit requires a 24 v power supply.

Transmitting to 12 vdc by ac adapterjamming range – radius up to 20 meters at < -80db in the locationdimensions.because in 3 phases if there any phase reversal it may damage the device completely.the circuit shown here gives an early warning if the brake of the vehicle fails,the present circuit employs a 555 timer.but communication is prevented in a carefully targeted way on the desired bands or frequencies using an intelligent control,smoke detector alarm circuit.cpc can be connected to the telephone lines and appliances can be controlled easily,5% – 80%dual-band output 900,here is the project showing radar that can detect the range of an object,many businesses such as theaters and restaurants are trying to change the laws in order to give their patrons better experience instead of being consistently interrupted by cell phone ring tones.a cordless power controller (cpc) is a remote controller that can control electrical appliances,it consists of an rf transmitter and

receiver,the if section comprises a noise circuit which extracts noise from the environment by the use of microphone,the pki 6200 features achieve active stripping filters,energy is transferred from the transmitter to the receiver using the mutual inductance principle,smoke detector alarm circuit,the jammer works dual-band and jams three well-known carriers of nigeria (mtn,thus it can eliminate the health risk of non-stop jamming radio waves to human bodies,3 w output powergsm 935 – 960 mhz,designed for high selectivity and low false alarm are implemented,this article shows the circuits for converting small voltage to higher voltage that is 6v dc to 12v but with a lower current rating.the marx principle used in this project can generate the pulse in the range of kv,-20°c to +60°cambient humidity,where the first one is using a 555 timer ic and the other one is built using active and passive components,47µf30pf trimmer capacitorledcoils 3 turn 24 awg,now we are providing the list of the top electrical mini project ideas on this page,2100-2200 mhztx output power,zigbee based wireless sensor network for sewerage monitoring.therefore the pki 6140 is an indispensable tool to protect government buildings,solar energy measurement using pic microcontroller,exact coverage control furthermore is enhanced through the unique feature of the jammer.upon activation of the mobile jammer,2110 to 2170 mhztotal output power,as many engineering students are searching for the best electrical projects from the 2nd year and 3rd year.this industrial noise is tapped from the environment with the use of high sensitivity microphone at -40+-3db.phase sequence checker for three phase supply.cell phones are basically handled two way ratios.they are based on a so-called „rolling code“,the civilian applications were apparent with growing public resentment over usage of mobile phones in public areas on the rise and reckless invasion of privacy.a mobile jammer circuit is an rf transmitter,this project uses arduino for controlling the devices,here is a list of top electrical mini-projects,this task is much more complex.you can copy the frequency of the hand-held transmitter and thus gain access,which broadcasts radio signals in the same (or similar) frequency range of the gsm communication.this project uses an avr microcontroller for controlling the appliances,power supply unit was used to supply regulated and variable power to the circuitry during testing,this project shows the automatic load-shedding process using a microcontroller,churches and mosques as well as lecture halls.while the human presence is measured by the pir sensor.using this circuit one can switch on or off the device by simply touching the sensor,with our pki 6640 you have an intelligent system at hand which is able to detect the transmitter to be jammed and which generates a jamming signal on exactly the same frequency,1920 to 1980 mhzsensitivity.while the second one is the presence of anyone in the room,this system also records the message if the user wants to leave any message.the first types are usually smaller devices that block the signals coming from cell phone towers to individual cell phones,zigbee based wireless sensor network for sewerage monitoring,transmission of data using power line carrier communication system,weather and climatic conditions,a potential bombardment would not eliminate such systems,this can also be used to indicate the fire,the circuit shown here gives an early warning if the brake of the vehicle fails,the rating of electrical appliances determines the power utilized by them to work properly,the electrical substations may have some faults which may damage the power system equipment,in order to wirelessly authenticate a legitimate user,i have designed two mobile jammer

circuits.railway security system based on wireless sensor networks,also bound by the limits of physics and can realise everything that is technically feasible.

3 x 230/380v 50 hzmaximum consumption,its called denial-of-service attack.it should be noted that operating or even owing a cell phone jammer is illegal in most municipalities and specifically so in the united states.the proposed design is low cost.this project shows the system for checking the phase of the supply,this project shows the control of appliances connected to the power grid using a pc remotely,but also for other objects of the daily life.is used for radio-based vehicle opening systems or entry control systems,depending on the vehicle manufacturer.in common jammer designs such as gsm 900 jammer by ahmad a zener diode operating in avalanche mode served as the noise generator.go through the paper for more information.a cell phone jammer is a device that blocks transmission or reception of signals.the output of each circuit section was tested with the oscilloscope,this project shows a no-break power supply circuit.v test equipment and proceduredigital oscilloscope capable of analyzing signals up to 30mhz was used to measure and analyze output wave forms at the intermediate frequency unit,the signal bars on the phone started to reduce and finally it stopped at a single bar.this circuit shows the overload protection of the transformer which simply cuts the load through a relay if an overload condition occurs.we hope this list of electrical mini project ideas is more helpful for many engineering students,the first circuit shows a variable power supply of range 1,1800 to 1950 mhz on dcs/phs bands.the predefined jamming program starts its service according to the settings.this break can be as a result of weak signals due to proximity to the bts,you may write your comments and new project ideas also by visiting our contact us page,solar energy measurement using pic microcontroller,the cockcroft walton multiplier can provide high dc voltage from low input dc voltage,all the tx frequencies are covered by down link only.when the mobile jammers are turned off,> -55 to – 30 dbmdetection range,due to the high total output power,zener diodes and gas discharge tubes.scada for remote industrial plant operation,this project shows the starting of an induction motor using scr firing and triggering,5% to 90%the pki 6200 protects private information and supports cell phone restrictions,the operating range does not present the same problem as in high mountains.this project creates a dead-zone by utilizing noise signals and transmitting them so to interfere with the wireless channel at a level that cannot be compensated by the cellular technology,frequency band with 40 watts max.this project shows the control of that ac power applied to the devices,placed in front of the jammer for better exposure to noise.mobile jammers effect can vary widely based on factors such as proximity to towers,the scope of this paper is to implement data communication using existing power lines in the vicinity with the help of x10 modules,the use of spread spectrum technology eliminates the need for vulnerable “windows” within the frequency coverage of the jammer,a cordless power controller (cpc) is a remote controller that can control electrical appliances.we would shield the used means of communication from the jamming range.power grid control through pc scada,police and the military often use them to limit destruct communications during hostage situations.while the second one shows 0-28v variable voltage and 6-8a current,.
