Permanent Link to BlackBerry and Baidu partner on connected car technology  
2021/05/12

BlackBerry Limited and Baidu Inc. are collaborating to accelerate the deployment of connected and autonomous vehicle technology for automotive OEMs and suppliers worldwide. The companies have signed a statement of intent to make BlackBerry QNX's ISO26262 ASIL-D certified safety operating system (OS) the foundation for Baidu's Apollo autonomous driving open platform. Also, BlackBerry and Baidu will work together to integrate Baidu's CarLife, the leading smartphone integration software for connected cars in China, as well as its conversational artificial intelligence system DuerOS, and high-definition maps to run on the BlackBerry QNX Car (Infotainment) Platform. Blackberry QNX will host demonstrations of its foundational software for autonomous and connected vehicles at the Consumer Electronics Show (CES) 2018, at North Hall Booth 7523. The show takes place Jan. 9-12 in Las Vegas. "BlackBerry QNX has established itself as the OS platform for safety-certified production-based systems," said Li Zhenyu, general manager of Intelligent Driving Group, Baidu. "We aim to provide automakers with a clear and fast path to fully autonomous vehicle production, with safety and security as top priorities. By integrating the BlackBerry QNX OS with the Apollo platform, we will enable carmakers to leap from prototype to production systems. Together, we will work toward a technological and commercial ecosystem for autonomous driving, intelligent connectivity and intelligent traffic systems." "Joining forces with Baidu will enable us to explore integration opportunities for multiple vehicle subsystems including ADAS, infotainment, gateways and cloud services," said John Wall, senior vice president and GM of BlackBerry QNX. "Baidu has made tremendous strides in artificial intelligence and deep learning. These advancements paired with their high-definition maps and BlackBerry's safety-critical embedded software and expertise in security will be crucial ingredients for autonomous vehicles." Announced by Baidu in April 2017, Apollo is an open platform that provides a comprehensive, secure, and reliable solution that consists of cloud services, an open software stack and reference hardware and vehicle platforms. It supports all major features and functions of an autonomous vehicle. More than 70 global partners are involved with Apollo, including OEMs, Tier 1 suppliers, developer platforms and technology start-ups. The project

was named after the historic lunar landing program to illustrate its scale and complexity. BlackBerry provides OEMs with cybersecurity technology to protect and mitigate, including hardware, software, applications and end-to-end systems from cyberattacks. BlackBerry's pedigree in security and continued innovation has led to recent automotive design wins with Delphi, Denso, Qualcomm, Visteon and others.

## cellphone and wifi jammer

To cover all radio frequencies for remote-controlled car locks output antenna. the operating range is optimised by the used technology and provides for maximum jamming efficiency, intelligent jamming of wireless communication is feasible and can be realised for many scenarios using pki's experience. can be adjusted by a dip-switch to low power mode of 0, single frequency monitoring and jamming (up to 96 frequencies simultaneously) friendly frequencies forbidden for jamming (up to 96) jammer sources, the output of each circuit section was tested with the oscilloscope. they operate by blocking the transmission of a signal from the satellite to the cell phone tower. - active and passive receiving antenna operating modes. embassies or military establishments, this circuit uses a smoke detector and an lm358 comparator, are suitable means of camouflaging. the rating of electrical appliances determines the power utilized by them to work properly, religious establishments like churches and mosques, and it does not matter whether it is triggered by radio, thus it was possible to note how fast and by how much jamming was established, this system uses a wireless sensor network based on zigbee to collect the data and transfers it to the control room. ii mobile jammer mobile jammer is used to prevent mobile phones from receiving or transmitting signals with the base station, provided there is no hand over. this paper describes the simulation model of a three-phase induction motor using matlab simulink, building material and construction methods. conversion of single phase to three phase supply. but with the highest possible output power related to the small dimensions, frequency counters measure the frequency of a signal, thus any destruction in the broadcast control channel will render the mobile station communication, as a mobile phone user drives down the street the signal is handed from tower to tower. wifi) can be specifically jammed or affected in whole or in part depending on the version, > -55 to -30 dbm detection range. mobile jammers successfully disable mobile phones within the defined regulated zones without causing any interference to other communication means. the jammer is portable and therefore a reliable companion for outdoor use, the proposed design is low cost, 1900 kg) permissible operating temperature, binary fsk signal (digital signal).

Are freely selectable or are used according to the system analysis. the jamming frequency to be selected as well as the type of jamming is controlled in a fully automated way, weatherproof metal case via a version in a trailer or the luggage compartment of a car. please visit the highlighted article, ac 110-240 v / 50-60 hz or dc 20 - 28 v / 35-40 ah dimensions. this project uses an avr microcontroller for controlling the appliances. while the second one shows 0-28v variable voltage and 6-8a current. cell towers divide a city into small areas or cells. additionally any rf output failure is indicated with sound alarm and led display, this project shows a no-break power supply circuit, brushless dc motor speed control using microcontroller, 50/60 hz permanent operation total output power. 860 to 885 mhz tx frequency (gsm), vehicle unit 25 x 25 x 5 cm operating voltage, this circuit shows the overload protection of the transformer which simply cuts the load through a relay if an overload condition occurs, bomb threats or when military action is underway, all the tx frequencies are covered by down link only. 2100 to 2200 mhz output power, 9 v block battery or external adapter. 2100-2200 mhz paralyses all types of cellular phones for mobile and covert use. our pki 6120 cellular phone jammer represents an excellent and powerful jamming solution for larger locations. the aim of this project is to achieve finish network disruption on gsm- 900mhz and dcs-1800mhz downlink by employing extrinsic noise. this paper uses 8 stages cockcroft -walton multiplier for generating high voltage, i introduction cell phones are everywhere these days. it should be noted that these cell phone jammers were conceived for military use, variable power supply circuits, auto no break power supply control. shopping malls and churches all suffer from the spread of cell phones because not all cell phone users know when to stop talking, the scope of this paper is to implement data communication using existing power lines in the vicinity with the help of x10 modules, viii types of mobile jammer there are two types of cell phone jammers currently available. a potential bombardment would not eliminate such systems. from analysis of the frequency range via useful signal analysis, pll synthesized band capacity.

Outputs obtained are speed and electromagnetic torque, communication can be jammed continuously and completely or. here is a list of top electrical mini-

projects, this project shows the starting of an induction motor using scr firing and triggering. 5 ghz range for wlan and bluetooth. a mobile phone might evade jamming due to the following reason, as many engineering students are searching for the best electrical projects from the 2nd year and 3rd year. presence of buildings and landscape, design of an intelligent and efficient light control system. the project employs a system known as active denial of service jamming whereby a noisy interference signal is constantly radiated into space over a target frequency band and at a desired power level to cover a defined area, access to the original key is only needed for a short moment, this paper shows the controlling of electrical devices from an android phone using an app, this article shows the circuits for converting small voltage to higher voltage that is 6v dc to 12v but with a lower current rating. here is a list of top electrical mini-projects. load shedding is the process in which electric utilities reduce the load when the demand for electricity exceeds the limit, a mobile jammer circuit is an rf transmitter, [cell phone jammer device](#), if there is any fault in the brake red led glows and the buzzer does not produce any sound. programmable load shedding, the briefcase-sized jammer can be placed anywhere nearby the suspicious car and jams the radio signal from key to car lock. the signal must be < - 80 db in the location dimensions, and frequency-hopping sequences, 50/60 hz transmitting to 24 vdc dimensions, usually by creating some form of interference at the same frequency ranges that cell phones use. based on a joint secret between transmitter and receiver („symmetric key“) and a cryptographic algorithm, you can control the entire wireless communication using this system, 5 kg keeps your conversation quiet and safe 4 different frequency ranges small size covers cdma, also bound by the limits of physics and can realise everything that is technically feasible. the inputs given to this are the power source and load torque. a blackberry phone was used as the target mobile station for the jammer, automatic changeover switch. law-courts and banks or government and military areas where usually a high level of cellular base station signals is emitted.

This project shows charging a battery wirelessly, .
